DETAILED ACTION

1. This office action is responsive to amendment filed on 04/03/2003.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Engler et al. (U.S. Patent No. 6,383,619).

Regarding claim 1, referring to Figs. 1, 2 and 4, Engler teaches an addressable display device comprising: a light transparent support body (404, 406) containing a plurality of anisotropic particles (412) contained within dielectric liquid-filled cavities (414) having walls having a higher dielectric constant than that of said dielectric fluid (416); a parallel pair of electrical conductors (V+ and V-), one on each surface of said support body (404, 406) and at least one of which is light transparent; each of said anisotropic particles (412) of the support body having dissimilar sections (112, 114) (Fig. 1B) of contrasting optical appearance and electrical conductivity, one section having an anisotropy for inducing a dipole moment which renders said section electrically-responsive; said dielectric liquid having dissolved therein a low concentration of an ionazable charge director material which, under application of an electric field between said electrical conductors (V+, V-), forms clusters of mobile ions of opposite charge and different mobilities which move within said liquid towards the cavity wall adjacent

Application/Control Number: 09/770,430

Art Unit: 2674

the electrical conductor of opposite polarity, said mobile ions inducing said dipole moment and

rotating said particles (412) so that the one section thereof faces the electrical conductor of

opposite polarity each time the polarity between said conductors is reversed (col. 3, lines 31-50,

col. 4, lines 1-19 and col. 8, lines 6-50).

Regarding claim 2, Engler teaches the particles require the application of an electric field

of a predetermined magnitude or threshold to the electrodes to cause the particles (412) to release

from attraction to one electrode and to rotate and face the other electrode (col. 8, lines 5-50).

Regarding claim 3, referring to Fig. 1B, Engler teaches particles (106) are bichromal balls

and said sections are hemispheres (112, 114) (col. 4, lines 1-20).

4. Applicant's arguments with respect to claims 1-3 have been considered but are moot in

view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Jennifer T. Nguyen whose telephone number is 703-305-3225.

The examiner can normally be reached on Mon-Fri from 9:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Richard A Hierpe can be reach at 703-305-4709.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

Washington, DC. 20231

Or faxed to: 703-872-9314 (for Technology Center 2600 only)
